Don't forget the Business Girls Dance Saturday night.

Young men spend your Winter at the R. S. A.

W. D. Mendenhall is driving a new "Viking" car. Looks real nifty indeed.

The cool frosty nights remind one that winter is near. The days however are warm, bright and very pleasant.

Have you investigated the possibilities of the course at the Raymond School of Agriculture.

The World Series Baseball games were the centre of attraction for quite a number this week.

You should be getting your Christmas Cards ordered now. Usually this is left to the last and then disappointment nearly always results.

Athol Cooper was a Raymond visitor over the week end. They had snow on the ground for four days at Beaver where Athol is teaching.

The good weather is allowing threshing to be finished and the beets are coming into the factory very rapidly and in almost perfect shape.

The Rex Barber Shop, Clarke Bros., Tailors, and A. Betts, are moving into their new shops in the Raymond Motors Block, this week.

A. W. Jensen and A. J. Draper of Spokane, Washington were in Raymond Tuesday. Mr. Draper and Wm. Redd labored in the mission field together. Messrs. Jensen and Draper are here selling mining stock.

A monoplane circled over the town a couple of times and was the centre of interest. The letters C.F. and A.F.H. were plainly visible on the fuselage.

Mrs. O. Ray Knight and Mrs. Arlo Palmer went to Great Falls on Tuesday this week.

Directors of Sugar Company Hear Encouraging Reports

INSPECT FACTORY
FOLLOWING ANNUAL MEETING
AT RAYMOND, BOARD MEMBERS

At a recent meeting of the general shareholders and directors of the Canadian Sugar Factories, Ltd., held at the plant which were made during the summer season were discussed, also a review of the 1928 sugar beet crop was presented by the secretary.

This meeting was held in the office of the sugar company here, after which an inspection of the plant was made, which showed that all the machinery and equipment had been overhauled and put in excellent shape to handle the big 1929 crop.

In reviewing the 1928 crop returns the records showed that 102,303 100-pound bags of sugar had been manufactured, all of which were sold before the run this fall had started, and that the entire 1928 sugar output had been distributed to consumers within

the province of Alberta.

The agricultural reports and estimates for the 1929 crop showed that approximately 8500 acres would be harvested and that about 62,000 tons of beets would be delivered to the factory this fall.

Improvements facilities have been made at the beet checks for increased storage which includes an additional shed and the necessary trackage which will provide additional trackage for the storage of lime rock.

The shareholders elected the following names to represent the board of directors: Heber J. Grant, Charles W. Nibley, W. H. Wattle, Willard T. Cannon, Mark Austin, O. Raymond Knight, Hon. W. A. Buchanan, H. E. Allen and T. George Wood.

Willard T. Cannon, who was recently made general manager of the Utah Idaho Sugar Company, to succeed Mr. Wattle, was added to the list of directors of the Canadian plant. All directors were re-elected to the positions which they held last year.

GOLF TOURNAMENT

A few of the lady members of the Sugar City Golf Club held a rather interesting tournament over last week-end. Owing to lack of time the tournament was played down to the final, and the final match is scheduled for the following week-end. In the first game Mrs. Zabriskie defeated Mrs. Gaetz four holes to two. The first mentioned player was in better form on the fairways while Mrs. Gaetz excelled in putting. In the second game Mrs. Leech easily disposed of her opponent, Mrs. Stewart third, which was anticipated as the winner is a pupil of a professional golfer. Mrs. Frank Taylor defeated to Mrs. Hodge. This brought Mrs. Zabriskie, Mrs. Leech, Mrs. Hodge and Mrs. C. C. Watson into the fours or final. In the afternoon Mrs. Leech won her second game by defeating

Mrs. Zabriskie two up, thereby bringing her forward into the finals. The game between Mrs. Hodge and Mrs. Watson created considerable interest as both players were keen to win, the honors falling to Mrs. Hodge by a margin of two holes. In this game Mrs. Watson made the sensational shot of the tournament by sinking a fifteen foot put. The final game will be played between Mrs. Leech and Mrs. Hodge. While the course is not all that could be desired, the games were enjoyed, and the outstanding feature of the tournament was the friendly rivalry displayed by the contestants.

"Bill" Card, A. F. Weideman and Glen Thomas, all of Cardston were business visitors in Raymond on Saturday.

Alvin Burrows Dies of Heart Failure

Funeral services over the remains of Alvin Burrows, 6 year old son of Mr. and Mrs. Wm. Burrows, who died Thursday, Oct. 3, were held in the Stake House on Saturday afternoon at 2 p. m.

The speakers, C. E. Allred and T. G. Wood offered words of comfort and consolation to the bereaved family in their hour of sorrow. Hymns by the choir were "The Deepening Trials" and "Nearer My God, to Thee," and Mrs. H. F. Allen sang "Oh My Father" as a solo.

The death of the lad was a surprise to all as he had been attending school and seemed to feel pretty good. He had a severe hemorrhage from which he never recovered. Interment was made in the local cemetery.

The sympathy of the community goes out to the bereaved parents and brothers and sisters, who are all well known, in their hour of sorrow.

The "Haywards Harvest Hoedown" held in the Opera House Saturday night was a most successful dance. The decorations were reasonable and delightful, the music was good, and the large crowd present thoroughly enjoyed themselves.

The ticket selling campaign for the Greater Movie Season Anniversary Week concluded Monday evening. Margaret Fisher, who sold 244 tickets was the winner of the first prize ring, and Lenore Seoville who sold 165 tickets won the second prize ring. The awards were made at Monday evening's screening of "Desert Nights."

Welling News

(From our own correspondent)

On account of wind on Thursday and Friday afternoon last week, the threshing machines were not able to work. By the end of this week, however, nearly all of the machines in the district will be pulled in.

Everyone is busy in the beets, and quite a number are hauling from here by truck to the factory. Due to a car shortage the beets are being dumped on the ground at the Anderson dump. Brick-laying on the now will be completed by the end of the week.

Wm. Parls of Raymond, is installing a hot air furnace in the home of Mr. and Mrs. Amasa Bullock.

Mrs. Ellen Thompson returned from the Hospital on Sunday.

Mr. and Mrs. Henry Thompson and James Thompson, spent Sunday last in Cardston.

Vernon A. Coleman motored to Calgary Friday for the week-end.

Mr. and Mrs. Amasa Bullock, Jr., and family were visitors here Sunday afternoon.

A large number of people from here went to Raymond Saturday evening for the Harvest Ball.

Etheridge Schumers was in Lethbridge Saturday, and brought their car home, which has been waiting for repairs since the accident about six weeks.

C. Peterson went to Lethbridge Monday morning for the window sashes for the new church.

David K. Bullock is busy hauling the materials for his new home which will be built just south of his father's. Alma Bullock and son Kay, went to Calgary Wednesday to have Kay's eyes treated.

Miss Beth Heninger was a guest on Sunday of Miss Iona Walton.

U.F.W.A. MONTHLY MEETING

The U.F.W.A. held their regular meeting October 3rd, at the home of Mrs. J. E. Fisher, the assisting hostesses being Mesdames Hague, Boyson, and Redd.

A paper on "Immigration" was presented by Mrs. Fern King, and one on "Legislation," by Mrs. Irene Redd. Mrs. Elanthe Seoville rendered a vocal solo. A report of the Dental Clinic held by Dr. Hall showed that 136 children had been treated at Clinic rates, representing a decided saving to the parents. It was the voice of the meeting that every assistance be given Dr. Hall, so that another clinic could be held next summer.

The next meeting will be held at the home of Mrs. Fern King on November 7th, 1929.

Free Show Tickets

If you want a present of a show ticket, come in to this office and subscribe if you are not now taking the paper, or renew your subscription if you are a subscriber and we will give you a ticket to the show for either Monday Tuesday, or Wednesday nights, except when a special show is put on.

This offer is only good from October 14th to 30th inclusive so if you want to do yourself a good turn by subscribing and also get a free show ticket, come in and we will give you a ticket to the Capitol for either of the first three nights of the week, except when some special program with a special price is put on.

Get quick, we can't prolong the time.

PREVENTION IS BETTER THAN CURE

(By Edna Kells)

That an ounce of prevention is worth a pound of cure is gospel which Home Nursing instructor stresses in these short courses of lectures on home nursing and first aid arranged by the Department of Public Health. Miss Amy Conroy, R. N. who spends the greater part of the year travelling through Alberta on this mission is particularly well qualified for her task being an "understanding person", as well as an expert nurse.

Throughout all her lectures she stresses the importance of preventive measures, of quarantining cases of contagious diseases, of cleanliness, of a pure water supply, and of sanitary toilets. She also teaches the women to make use of simple home facilities in nursing the sick.

Miss Conroy's itinerary is arranged early in the spring with a view to covering as much ground as possible. A local organization assumes the responsibility of making the necessary arrangements in the place she is to visit. She does the rest. In Magrath, where she was "seen in action" the Women's Bureau, the first organized under the legislation passed last winter, arranged the course. 2011 women and many girls attended Miss Conroy's lectures in 1928. This year they have turned out in larger numbers.

Few families escape all illness and accidents, so it is just as well that mother or big sister knows what to do when emergencies arise. A regular hospital course of training is impossible, but from two or four days lectures, they can grasp sufficient to give them a working knowledge of what to do.

In Magrath, forty women and girls attended the first of the four lectures, and that in spite of the fact that harvest was at its height. Monday's lecture had to do with the routine care of the sick. More specific directions for the care of patients suffering from contagious and infectious diseases were given in Tuesday's lecture. First aid was dealt with on Wednesday and Maternity work on Thursday.

Miss Conroy's work is not over when she finishes her lectures. At every point she is asked to visit the schools, look over the sanitary arrangements, and make suggestions as to how they may be improved. After the visit she makes an ideal layout, and tells the women how they may bring this about. Sometimes the teacher has difficulties which call for outside advice. Certain pupils may be problems beyond her understanding. The nurse visits the home and tactfully endeavors to get at the root of the trouble and remedy it. New Canadians are visited, welcomed, and given advice that will help them adapt themselves to Canadian conditions. Miss Conroy invariably finds these newcomers appreciative of the little attention.

Sometimes the nurse lends a hand to the local doctor who needs skilled attention for a sick patient unable to have a private nurse. Sometimes she is called upon to give first aid to the injured, or to advise people who are taking treatment from a doctor at a distance and unable to see him frequently. The nurse responds to every call.

And so Miss Conroy goes the rounds of the province, leaving knowledge and inspiration in her wake, and a legacy of skillful hands and kindly heart. It is little wonder that the nurse and her little gray runabout are welcomed wherever they go.

Raising and Fattening Beef Calves Explained

nant is greater.

Calves can be carried longer than mature steers when unexpected circumstances arise, such as a bad market, a strike, or an embargo as they will retain their "bloom" longer after they are ready to market.

It is not always advisable to try to fatten calves, for the following reasons: Fattening calves require more attention and skill on the part of the man feeding them than is the case with older cattle.

Calves of slow-maturing type will not fatten rapidly enough to make desirable carcasses as yearlings. Such calves should generally be carried about two years as stockers before they are fattened.

The total feed required to produce a fat 3-year-old steer may be made up of a much larger proportion of roughages than that required to produce a fat yearling. Mature cattle can eat coarser roughages and broken ear corn much better than young cattle.

Mature cattle may be fattened in a much shorter time than calves, as they have only to fatten, while calves grow as well as fatten.

Calves Suitable for Fattening

The wide, deep-bodied, smooth, thick fleshed, and well-grown calf with short legs and a good quality as indicated by fineness of hair, medium bone, smoothness of flesh, refinement about the head, and a lack of pasciness is the type best suited for making finished yearlings. Uniformity in size, weight and color should not be overlooked, because such factors are an advantage in marketing.

Calves to be fattened should not be allowed to lose the fat they have acquired from milk feeding. A calf lacking in early maturing qualities will use most of its feed for growth instead of fattening. Quality and finish are very desirable in fat yearlings. Half-finished yearling do not usually bring enough on the market to make their production profitable.

All the principal beef breeds of the United States, such as the Shorthorn, Hereford, Aberdeen-Angus, and Galloway, are suitable for producing calves to be fattened as yearlings. The problem of selecting the individual animal after the breed has been chosen is of much greater importance than the selection of the breed itself.

Farmers' Bulletin 612, Breeds of Beef Cattle, discusses the characteristics of the different breeds. It may be obtained without charge on application to the Department of Agriculture, Washington, D. C.

How to Obtain Calves for Fattening

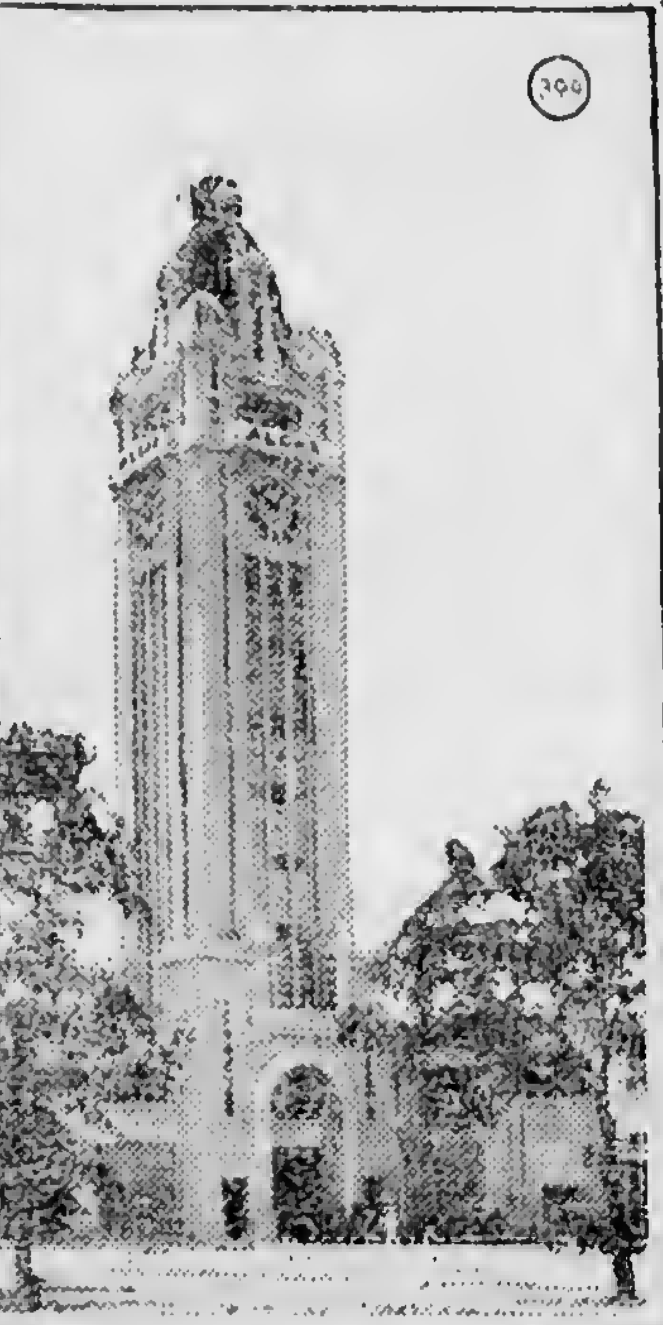

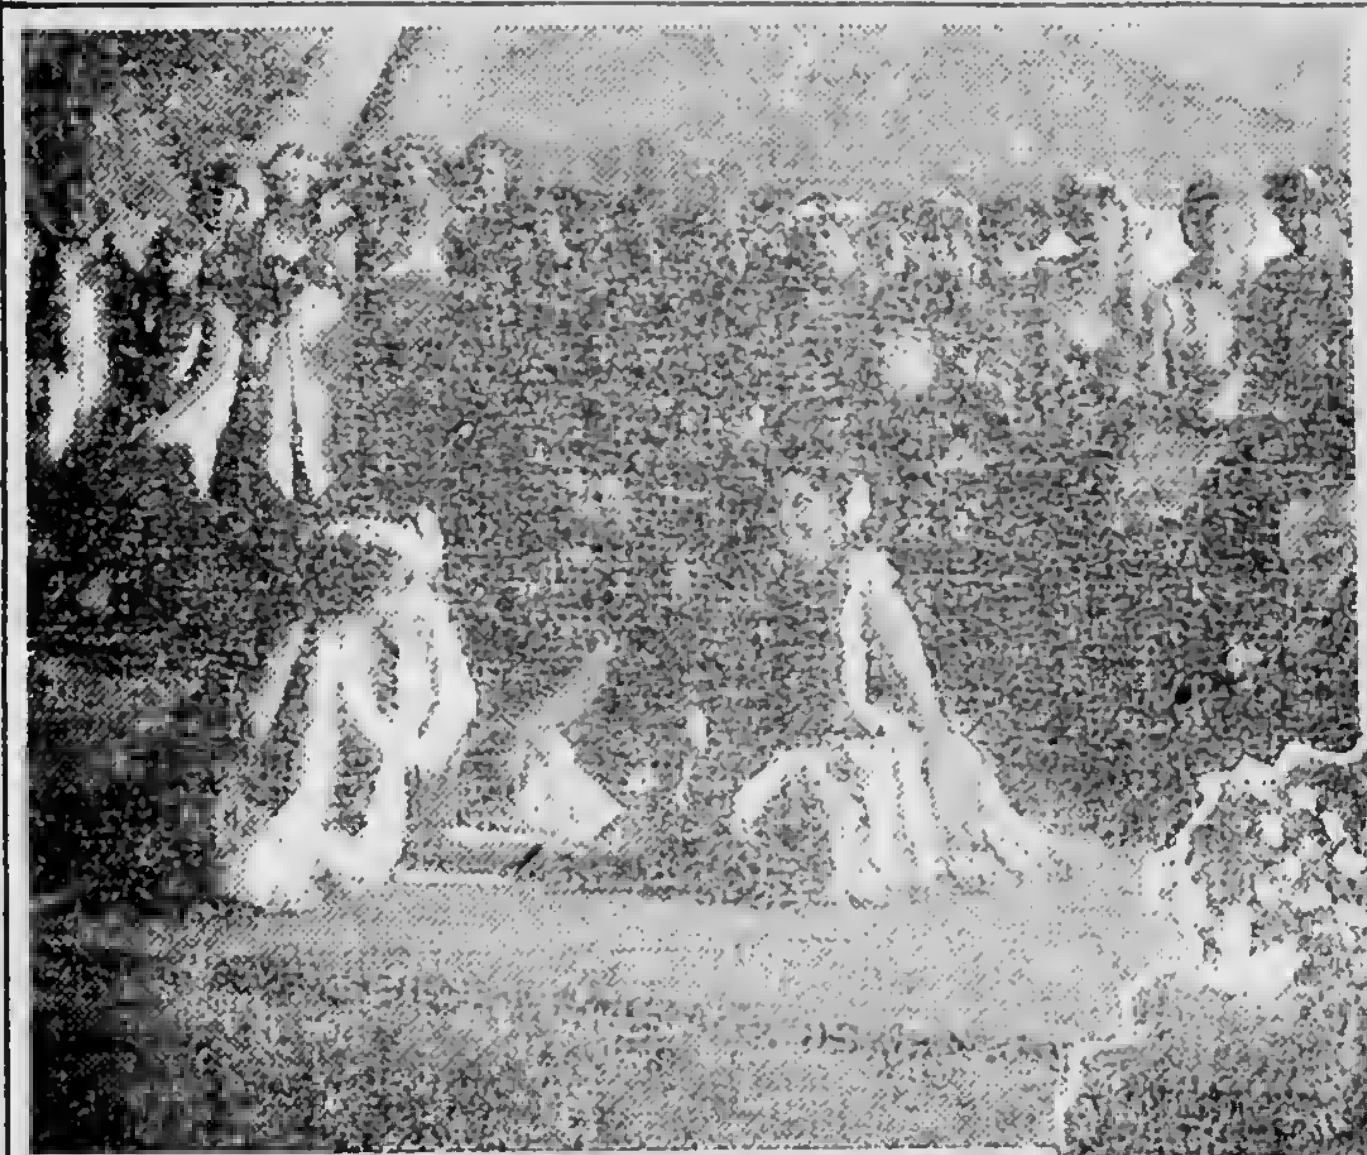

The ideal way to obtain calves suitable for fattening is to keep a good herd of grade or purebred beef cows and a good, purebred beef bull and raise them. If the calves are taught to eat grain while they are being suckled, they can be weaned with only a slight interruption of their growth and a slight loss of milk fat. The slighter this interruption and loss of fat the less feed will be required to put them in the desired condition and the sooner they can be finished for market.

The bull should be an individual of good beef form and an early maturing type, as success in raising and fattening calves will depend to a very large extent on the bull's propensity in transmitting his desirable characteristics to his calves. The cows should be of uniform breeding and of colors representative of the beef breeds. They should be of good size, weighing at least 900 pounds in medium condition. A very important factor, which, like milk production, can be determined conclusively by looking at a cow, is that of early maturity. A thick, low-set body and fine quality are indications of early maturity. (Cigs. 1, 2, and 3.) The cow should give plenty of milk to keep the calf fat and growing until it is about six months old. By that age calves can get along fairly well on grain, some meal rich in protein, and hay or pasture, but they will do much better if they have a moderate quantity of milk supplemented by grain and roughage until they are about eight months old.

If it is not practicable to keep a

"White Empresses" to Call at Honolulu.

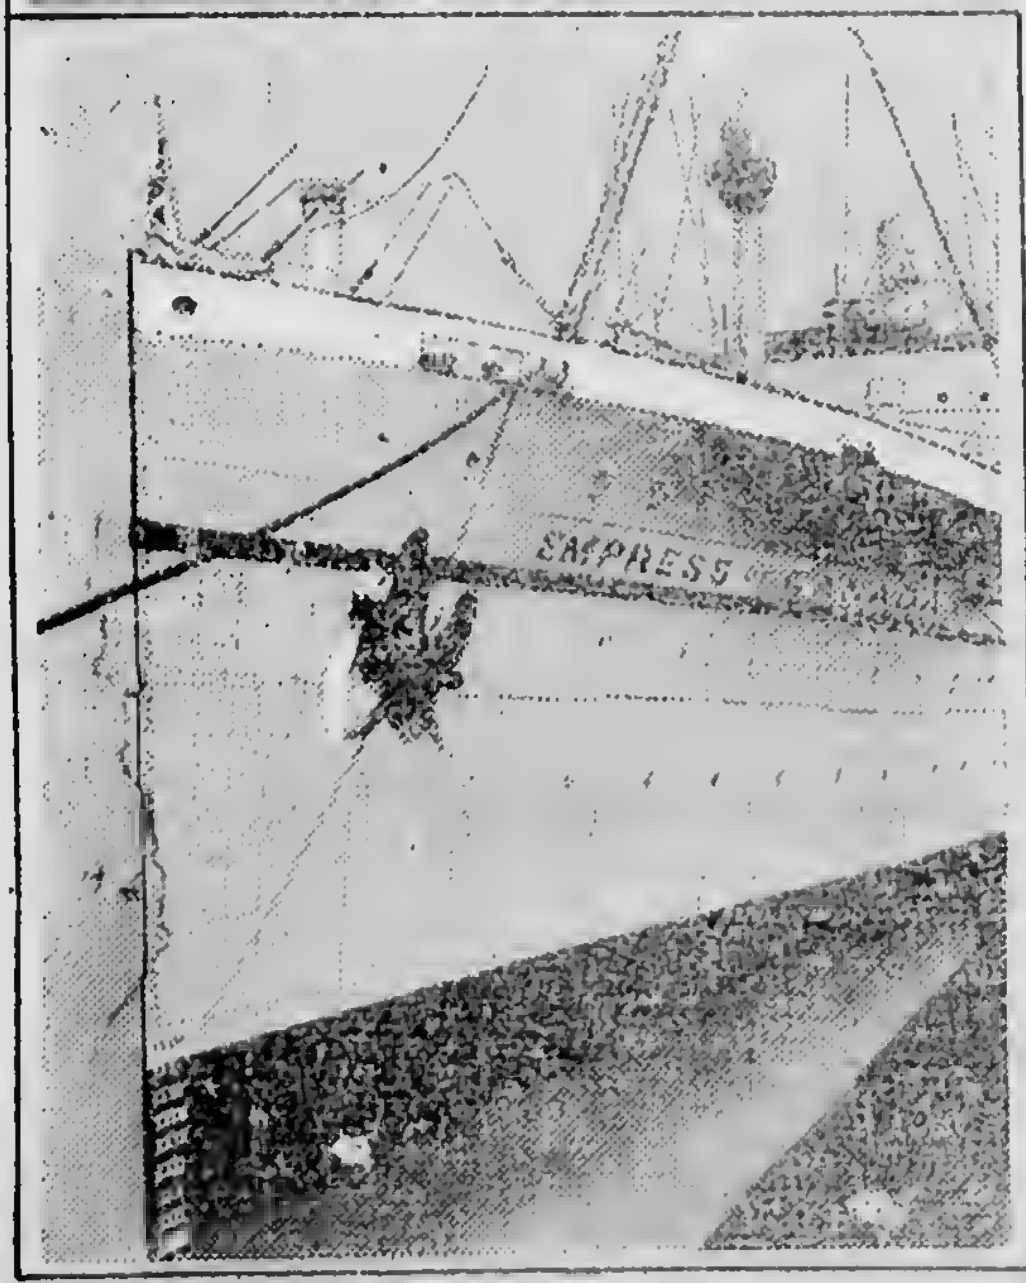

that flings its crest high in proud greeting or dignified farewell, is now to be added to the westward route of the famous Canadian Pacific liners—the White Empresses that long ago gained for Canada the Blue Ribbon for speed on the Pacific.

Starting December 7th from Victoria and Vancouver the Empress of Canada, which has just returned to service after being equipped with the fastest and most powerful engines on the Pacific, will inaugurate the new service and will call at Honolulu six days later.

Glimpses of some of the features of the "Island Paradise of the Pacific" are shown above, with (left) the giant prow of the 21,500 ton Empress of Canada. Behind the flower-decked maidens may be discerned the stately outlines of Diamond Head, famous in song and story. At the right is the Aloha Tower of the docks, that spells a Hawaiian welcome to the traveller.

Passengers to the Orient by the new Canadian Pacific service will be given the opportunity of staying over for the next ship or of paying a visit during the twelve hours the Empresses remain in Honolulu. Visitors to the Islands who plan to leave Jack Frost behind have many options for their return voyage. Several lines have co-operated with the Canadian company, and, after a long lazy winter on the sands of Waikiki Beach, travellers may return to Vancouver by the Canadian Australasian Royal Mail line direct, or may come back by a Matson Line steamer to Portland, Seattle or San Francisco, or to Los Angeles by the Los Angeles Steamship Company.

Honolulu, famous for its lovely Hawaiian dancers, its splendid-physiognomed swimmers, wreaths of flowers, Waikiki Beach and lordly Diamond Head

LET US TAKE STOCK

The harvest is drawing to a close. The wheat sold and returns being received, accounts are being squared off, and money being put into circulation.

What have you to say of the past season? What do you think of Sunny Southern Alberta? True it is a land of extremes; and it is also a land of wonderful comebacks.

Turn your mind back to the spring of 1929. The skies were overcast for days at a time, rain and snow fell continually, roads which were not destined to become bottomless pits, fields were waterlogged, and the peasants put on their oilskins and rubber boots and went into wailing because of fate putting them in such a country, and modifying adjectives were used in abundance to convey the full meaning, to the speaker at least. It looked bad, but the optimist went ahead and worked when he could and said little.

The clouds gave way to clear skies and sunshine. The seeding season was late but favorable, and everyone kept the drill going early and late, seeding every possible acre when things looked so favorable. Everybody smiled.

Then summer came. Hay stacks began to dot the landscape. Haying was fine and the hay never better for quality. But we had no rain. Day after day the sun shone bright, clear and hot, without a drop of rain. Faces commenced to be long-drawn out affairs. Grain started turning yellow at the base of the stalks. Again "blue ruin" was the war cry of nearly everyone. Then the grain commenced to ripen. Dubious farmer went into the fields to inspect the heads, questioning the advisability of even pulling into the fields with a binder; and wonder of wonders, the grain on good summer-fallowed land was excellent with long heads and nice plump kernels. And even the stubbled in grain filled very well considering the long period of drought.

The grain was cut, and still doubt prevailed. Many feared the grain

would shrink in hardening, and when it didn't, a great many were sure of a wet fall so that every bushel would either be sprouted, or graded tough. And it came to pass, that even this didn't happen, and the disappointment to many false prophets was great.

No! the grain was marketed and a great deal of it graded No. 1, and the remainder 2, except a little that was late and slightly frosted, and the yields of 25 to 50 bushels, almost double what was expected.

The country came back with a bang. The monetary returns from the grain crop is heavier than for many years. The beets are yielding generally above estimates and hundreds of thousands of dollars will be paid out to farmers of this district for this crop.

All in all we have been greatly blessed, and now we should reciprocate by meeting our honest obligations, improving our homes and farms, and making our surroundings more pleasant. Make better preparations for next year's activities. And if we like the country, boost for it. If you don't like it, for heaven's sake use some of your money to buy a ticket and seek a land where you will be satisfied. It won't be a better country, but it may cause you to be satisfied, and that's what we want.

The plans for the new Town Hall and Fire Hall are in the window at the Raymond Pharmacy. Look them over and if you don't like them, now is the time to speak.

NOTICE

It will be appreciated by the management and will save anyone being offended if Raymond people will kindly refrain from visiting at the Suga Factory on Sundays. Out of town visitors will be welcome, but local people should visit during the week. Children absolutely will not be allowed on the premises unless accompanied by parents or guardians. This risk is too great.

CARD OF THANKS

We desire to express our deep appreciation for the many kind notes and expressions of sympathy bestowed upon us during the sickness and death of our beloved son and brother, Alvin. We especially thank Mrs. E. Witbeck for her thoughtfulness.

Mr. and Mrs. Wm. Burrows and family.

RED CROSS ON THE AIR

Through the courtesy of the Edmonton Journal, the Red Cross Society is again offering its fall and winter program, entitled "The Friendly Hour" on Tuesday afternoon at 3 o'clock, over C. J. A. C. and C. J. C. A.

The program consists of one hour on health education and entertainment. It covers a wide field in its subject matter, the presentation of which is attractive and interesting. The romance of the history of medicine, the wonderful story of the fight against ignorance and superstition and marvels modern achievements in sanitation and hygiene, will provide many fine features of this program.

Side lights on the Red Cross service in Alberta will be given from time to time. The protective care and treatment of hundreds of crippled children

in Calgary and Edmonton make a story of true human interest. The vast educational work of Junior Red Cross in the schools will be explained and enlarged upon. The kindly service to immigrants and refugees along with touching tales of the relief bureau and the disaster emergency service, will show one side of life of which the world is too often in ignorance. How Red Cross serves everyone, in a story that is well worth hearing.

HEALTH SERVICE of the CANADIAN MEDICAL ASSOCIATION

"HOW OLD IS ANN?"

We do not profess to give an answer to the number of years which Ann has lived, or the number of birth days which she has celebrated, because we are quite willing to leave the solution of that problem to the mathematicians, or to those who enjoy struggling with such puzzles. The reason why we refer to Ann's age is because this gives us the opportunity to point out to our readers that there are more ways of determining age than by counting years. By this we mean that the real age of a person is not represented by the number of years passed since his birthday, but rather by the condition of the body at the present time.

The body is frequently likened to a machine or an engine. The body differs from any other machine in that when a part is worn out, it cannot be replaced. The true age of the body is shown by the condition of various essential parts. If they show signs of wear, then the body is growing old, regardless of the number of birthdays passed. Old age is merely the wearing out of the body machine, and health work seeks to prevent a premature old age by protecting the body from needless strains, and by warning against the over-indulgences which are responsible for many of the breaks during the years when fitness should be maintained.

If we were asked to determine Ann's age on this basis, we would want to know the condition of her heart, her arteries, her kidneys, her lungs, and of these, particularly, would be interested in heart, arteries and kidneys, because it is in these organs that the first signs of wear are usually seen. We would then want to know how Ann lives. What does she eat? Does she get sufficient rest and recreation? In other words, does she live a hygienic life? Knowing the actual condition of her body and her manner of living, we would know much more about her true age than does a mathematician who solves the problem.

Questions, concerning Health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered personally by letter.

Doubling the Arguments for Saving

All that can be said in favor of opening a savings account in the Canadian Bank of Commerce may be repeated with greater emphasis as regards a joint savings account. Joint accounts are primarily for convenience of depositors, but where two people are bound together by common interests, the moral as well as the practical value of working together, planning their financial betterment with the aid of a joint bank account is clearly evident. The Canadian Bank of Commerce solicits your joint savings account.

Alberta and I commended the peaceful programme to the generosity of the Public. After Dedictory prayer by the Right Rev. Bishop Sherman, May or Osborne was handed the key to the building, and in the absence of Mr. Patrick Burns, who had been called out of the city at the last minute, opened the door and declared the hospital officially opened.

The new hospital is capable of caring for forty little patients an increase of eight over the previous building, and is filled to capacity.

Set in an acre and a half of ground the larger brick building has a splendid situation on the heights of Mount Royal, where it commands a wonderful view of the City and surroundings. Trees and lawns make a charming setting for the sick children who are able to appreciate the beauty of their home on the high hill to a greater degree than others. The newly decorated wards are one and all airy and spacious. They are tinted in soft light shades and with the spotless cleanliness for which all hospitals are noted, they present an inviting picture.

Boys and girls and babies are members of this happy family of children, and to the onlooker there is a great deal of pathos in their appearance as they lie in bed in splints or casts or other hospital appliances. Wonderful stories of the successful cures are told by the nurses who take a real pride in the little people under their care.

Gymnasium splendidly equipped assists in the re-education of their muscles helping in the task of straightening out little limbs. A day school is held by a certified teacher who, besides giving the regular academic instruction, also teaches handicraft, specializing in the art of flower making in which the children have become famous.

NEW RED CROSS HOSPITAL OPENED IN CALGARY

Entering on a new period of development, the Red Cross has opened its fine new Crippled Children's Hospital in the City of Calgary. After seven years in rented quarters the Society managed to obtain a building of their own, far more suitable for the work, and this building was opened at an interesting ceremony at which hundreds of Calgary's citizens, in addition to numbers from outside points, were present.

Hon. R. B. Bennett, a life long friend of Red Cross and one who is especially proud of the achievements in the work of aiding the crippled child was one of the speakers of the afternoon. Mayor Osborne in a short address congratulated the Society bringing Red Cross to such a point of progress in

Fattening of Beef Calves Explained

(Continued from Front Page)

breeding herd, one may buy weaning calves suitable for fattening. While they may sometimes be procured from the Corn Belt, the Cotton Belt, and the Appalachian region, the principal source of such calves is the western ranges. When calves are purchased, precautions must be taken to see that they are free from disease. If they are shipped by rail, such hardships as long hauls, delays, and lack of good feed and water should be avoided as much as possible. The cars in which they are shipped should be thoroughly cleaned and disinfected before the shipment.

As most calves are dropped in the spring and weaned in the fall, the fall is the best time to get a good selection. One may purchase them at public stockyards, on the ranches where they are produced, or at public auction sales such as have been held recently at central points in the Corn Belt by producers' associations of the southwest. Such associations are able to furnish uniform lots of tribulations of their members. Generally the public stockyards offer the largest and most continuous supply of calves conveniently concentrated.

Management of the Farm Breeding Herd

Unless a farmer has some satisfactory method of marketing small lots of cattle, he should keep cows enough to produce at least one earload of fat yearlings. A 25 foot ear holds approximately 25 yearlings averaging 1,000 pounds. As the farmer should get at least an 85 per cent. calf crop, approximately 32 cows would be necessary to produce a earload of fat yearlings. About 8 more cows, or 40 in all should be kept to replace the herd every five or six years.

Feeders who have calves enough for two earloads have an advantage in that the animals can be graded, the better ones being placed in one ear, and the inferior ones in another; or, if the calves do not finish uniformly one earload may be shipped, while the other one is held until the animals are finished.

As uniformity in size and weight are important factors in producing fat yearlings, it is desirable that all the cows should calve within as short a time as possible. To calve in April the cows should be bred during the latter part of June and up to the latter part of July. If it is desired to have the calves dropped in October, the cows should be bred during the latter part of December or the first part of January. Fall calves are suckled by their dams during the winter time and go on pasture at weaning time. After spending the summer on pasture supplemented with grain, they are put into a dry lot for finishing. Spring calves on full feed during the winter should not be turned on pasture in the spring and consequently make little use of grass. On the other hand, greater expenditures for shelter, care, and feed for the cows are required when calves are dropped in the fall. The bull should be kept separate from the cows until the breeding season arrives. Every effort should be made to get all the cows in calf during six weeks or two months. Farmers' Bulletins 1935 and 1932 take up the problems of farm and range management of beef breeding herds, respectively.

Feeding the Calf from Birth to Weaning Time

Unless the cows in the herd are exceptional milkers, calves intended for fat yearlings should be started on a grain mixture, such as corn and oats, when from 4 to 6 weeks old. Nothing so stimulates growth and early maturity as milk sucked fresh from the dam, but in all cases calves should be fed liberally on grain for at least one month before weaning time.

Every effort should be made to get the calves through the weaning period without the loss of their milk fat. (Fig. 4.) The grain ration should be increased so as to permit as little change in their rate of growth and fattening as possible. Some feeders build "creeps" in the pastures or lots so that the calf can get their grain without disturbance from the cows. Creeps consist of small pens with openings which permit only the calves to enter. These openings may have rollers on each side to prevent bruising the calves. The creep should be near the watering place, shade trees, or some other place where the herd spends time enough every day for the calves to learn readily to go in for feed. No more feed should be put in each day than the calves will clean up. Any feed dampened by rain should be removed before it sours.

Calves from heavy milking cows should be weaned gradually. If they are running with the cows the weaning should be begun by keeping them up and allowing them to suck only twice each day for five or six days,

after which the should be allowed to suck only once a day for a similar period. Then one day's suckling may be omitted, and later two days. Thus the entire weaning takes from 10 to 15 days. The calves of cows giving little milk should be weaned abruptly by separating them as far as practicable.

Fall calves should not be weaned until after the cows and calves are on grass. Spring calves should either be kept on grass after weaning in the
